NEW BALANCE/ TRANSACTION QUERY IN THE WEB SERVICES CHANNEL

samlink

A Kyndryl Company

1 Balance/transaction query in the Web Services channel, search by account number

The balance/transaction query search has been simplified to make the service work better for customers who have a large number of accounts in the service. The former query is available as normal.

The new service applies to Samlink's customer banks Savings Banks and Oma Savings Bank.

The query will be carried out as before with the application ID RA (transaction query).

The new query is made using the DownloadFile request without first having made a DownloadFileList request. The desired IBAN account number for which the balance/transaction query is to be made is entered in the FileReference field of the DownloadFile request. No change in the schema.

```
<ApplicationRequest xmlns="http://bxd.fi/xmldata/"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
    <CustomerId>94981863</CustomerId>
    <Command>DownloadFile</Command>
